Ag Mechanics Exam 2016

Directions: Write your answers on the computer scantron bubble sheet. Put your name on the answer form. Read each question carefully and select the correct answer from the list provided for the specific question. GOOD-LUCK!!!

ELECTRICITY

- 1. Which of the following flows through a conductor to create electricity?
 - a) Protons
 - b) Electrons
 - c) Neutrons
 - d) Ohms
- 2. A conductor allows electricity to flow in either direction through it.
 - a) True
 - b) False
- 3. The pressure or force that pushes the electricity through the conductor is called?
 - a) amperage or current
 - b) resistance or ohms
 - c) voltage
 - d) watts or power
 - e) none of the above
- 4. The quantity of electricity flowing is called?
 - a) amperage or current
 - b) resistance or ohms
 - c) voltage
 - d) watts or power
 - e) none of the above
- 5. A byproduct of electron flow is?
 - a) power
 - b) fission
 - c) condensation
 - d) heat

6. The unit for electrical power, (such as the size or rating of a heater) is called?

- a) horsepower
- b) ohms
- c) voltage
- d) amps
- e) watts

- 7. Your electric bill is calculated by the number of kilowatt-hours used times the cost for a kilowatt-hour.
 - a) True
 - b) False

8. Opposition to electricity flowing in a circuit is called?

- a) amperage or current
- b) resistance or ohms
- c)voltage
- d) watts or power
- e) none of the above

9. Electricity in this country is produced by DC generators at large power plants.

- a) true
- b) False

10. Electrons that flow one direction and do not reverse their flow is called DC or direct current.

- a) True
- b) False
- 11. Flashlight and car batteries store electricity and release it as AC current.
 - a) True
 - b) False

12. Magnetic lines of force are created around the conductor when electricity flows through that conductor. a)True

- b)False
- 13. Insulators prevent electrical flow because they have which of the following properties?
 - a) low resistance
 - b) high resistance
 - c) low voltage
 - d) high voltage

14. Hertz refers to the number of times alternating current changes direction in a second.

- a) True.
- b) False

15. Which of the following is true regarding conductors and resistance?

- a) as conductor length increase's, resistance decreases
- b) as the area of a conductor increases, resistance goes up
- c) as the temperature of a conductor goes up; resistance goes down
- d) all of the above
- e) none of the above

16. An closed circuit is one in which the electrons can flow.

- a) True
- b) False

17. A short circuit is when all of the electricity bypasses the intended load.

- a) True
- b) False
- 18. Which of the following may be used to safely protect the circuit from current surges?
 - a) fuse
 - b) circuit breaker
 - c) copper penny
 - d) all of the above
 - e) only a & b are correct
- 19. The wire that represents the ungrounded conductor has what color insulation?
 - a) black
 - b) white
 - c) red
 - d) green
 - e) none of the above
- 20. In a parallel circuit, if the first light bulb burns out, the rest of the lights will?
 - a) burn normal
 - b) burn less bright
 - c) burn brighter
 - d) not burn at all
 - e) none of the above
- 21. Which of the following are required for a proper circuit in addition to a switch, conductors, load, and over-current protection?
 - a) amperage
 - b) voltage source
 - c) over-current protection
 - d) resistance
- 22. Stray voltage does not affect livestock production.
 - a) True
 - b) False
- 23. When wiring a simple one way switch,(on/off), to control a light circuit, the switch is connected to which of the wires?
 - a) Black
 - b) White
 - c) Redd) Black & white
 - e) Any of the above

24. Your body must absorb 10 amps of current before electrocution will take place.

- a) True
- b) False
- 25. Before working on an electrical circuit, you should check to be sure the electrical circuit is off.
 - a) True
 - b) False

ELECTRIC MOTORS

- 26. Electric motors draw 7-8 times their running amperage during their initial start up
 - a. true
 - b. false
- 27. Electric motors are a relative inexpensive source of power.
 - a. true
 - b. false
- 28. Electric motors are approximately 75 % efficient.
 - a. true b. false
- 29. A car starter is an example of a DC motor.
 - a. true
 - b.false
- 30. A dual voltage motor is one that can run on either AC or DC electricity.
 - a. true b.false
- 31. Which of the following electric motors would be used to drive a feed auger or silo unloader?
 - a.universal b.capacitor c.repulsion start d.split-phase
- 32. The type of electric motor used in an electric drill?
 - a.universal b.capacitor c.repulsion start d.split-phase
- 33. Which of the following electric motors would most likely be used to drive an exhaust fan? a.universal
 - b.capacitor c.repulsion start d.split-phase

TRACTOR OPERATION

- 34. If you drive a tractor on the highway for only a short distance a slow moving vehicle emblem is not required.
 - a) True
 - b) False
- 35. To safely operate a tractor on sloped surfaces the operator should drive directly up and down the slope and not across the slope.
 - a) True
 - b) False
- 36. The 2 standard PTO shaft speeds on a tractor are 540 and 1080 rpms.
 - a) True
 - b) False
- 37. The PTO shaft may be slid on or attached while the tractor engine is running.
 - a) True
 - b) False
- 38. Overhead electrical power lines are a safety hazard when moving tall or long farm equipment such as a grain auger.
 - a) True
 - b) False
- 39. The operator should never start the tractor from the ground.
 - a) True
 - b) False
- 40. A tractor can be used to haul many things, such as grain, manure, feed, and extra riders.
 - a) True
 - b) False

"MECH" MATH

- 41. A silo 20 feet in diameter and 80 feet tall could hold how many cubic feet of silage?
 - a) 1600
 - b) 16000
 - c) 25120
 - d) none of the above
- 42. If a ton of silage is equal to 50 cubic feet and the yield is 20 tons per acre, how many acres could be harvested and put into this silo?
 - a) 12.84
 - b) 100.4
 - c) 25.12
 - d) none of the above

43. Ten 100 watt light bulbs that burn for 1 hour is how many KwH?

- a) 1
- b) 10
- c) 100
- d) 1000

- 44. A concrete pad that is to support a grain bin is 24' in diameter and 6 inches deep. How many cubic feet of concrete will it take to form the pad?
 - a) 144
 - b) 226
 - c) 360
 - d) 552
- 45. A yard of concrete is how many cubic feet?
 - a) 3
 - b) 9
 - c) 18
 - d) 27
- 46. A water pump that will pump at a rate of 10 cubic feet per minute has an output in gallons of how much?a) 0.75
 - b) 7.5
 - c) 27.5
 - d) 75
 - e) none of the above
- 47. A 1000 watt heater that is powered by a 240 volt voltage source would have a current of how many amps?
 - a) 16.17
 b) 12.17
 c) 8.17
 - d) 4.17
- 48. An electrical load with 10 ohms of resistance and powered by 240 volts would have a current flow of how many amps?
 - a) 6
 - b) 12
 - c) 18
 - d) 24
- 49. How many cubic inches in a board foot of lumber?
 - a) 12
 - b) 24
 - c) 96
 - d) 124
 - e) 144
- 50. If an irrigation ditch has to have a 0.2% slope to make the water flow through it. How many feet of drop or slope would there be for every 100 feet of horizontal distance?
 - a) .2
 - b) 2.0
 - c) 20
 - d) none of the above

FIELD OPERATIONS

- 51. Which of the following will hold the most moisture?
 - a. sand
 - b. silt
 - c. clay
 - d. Does not matter
- 52. Increased amounts of crop residue will have an effect on the cropping practices for the next year?
 - a. true
 - b. false
- 53. The sprayer boom must be parallel to the ground at all times?
 - a. true
 - b. false
- 54. Sprayer speed does not have an effect on the amount of chemical applied per acre?
 - a. true
 - b. false
- 55. A diesel engine burning bio diesel will produce less emissions of?
 - a. CO_2
 - b. Sulphur
 - c. PAH's
 - d. All of the above
- 56. If (speed x width)/8.25 = the capacity of a machine, then an 8 row 30" corn planter pulled at a speed of 5.5 mph would be able to do?
 - a. 13.3 acres/hour
 - b. 6.3 acres/hour
 - c. 15.3 acres per hour
 - d. None of the above
- 57. Which of the following statements is true regarding machine performance?
 - a. Actual capacity is equal to theoretical capacity
 - b. Actual capacity is less than theoretical capacity
 - c. Actual capacity is greater than theoretical capacity
 - d. None of the above
- 58. A field with a lot of crop residue will require which of the following?
 - a. Increase spray pressure
 - b. Decrease spray pressure
 - c. Lower spray boom height
 - d. Higher spray boom height

59. Which of the following row widths will have the corn seeds planted closer together?

- a. 40"
- b. 36"
- c. 30"
- d. All the same
- 60. The number of square feet in 1 acre is?
 - **a**. 640
 - b. 5280
 - c. 24,500
 - d. 43,560
 - e. None of the above

VENTILATION

- 61. Which of the following will hold the least moisture?
 - a. Cold air
 - b. Warm air
 - c. Hot air
 - d. Does not matter
- 62. Which air mass will rise up in a livestock building?
 - a. Cold air
 - b. Warm air
 - c. Both will rise equally
 - d. None of the above
- 63. Trapped moisture in a livestock building may cause which of the following?
 - a. Sickness
 - b. Deterioration to the building materials
 - c. High humidity
 - d. All of the above
- 64. Which of the following conditions will cause moisture condensation on the inside of a livestock building?
 - a. Cold air on the outside of the roof, warm air on the inside
 - b. Cold air on the outside of the roof, cold air on the inside
 - c. Warm air on the outside, cool air on the inside
 - d. None of the above
- 65. Animals inside a building will produce which of the following that will need to be ventilated?
 - a. Methane
 - b. Moisture
 - c. Heat
 - d. All of the above

- 66. In a naturally ventilated livestock building, where should the air vents be placed for the air exiting the building?
 - a. Middle of the wall
 - b. Bottom of the wall
 - c. Top of the wall
 - d. Peak of the roof or ridge
- 67. In a naturally ventilated livestock building, where should the air vents be placed for the fresh air entering the building?
 - a.Middle of the wall
 - b. Bottom of the wall
 - c.Top of the wall
 - d. Peak of the roof or ridge
- 68. A poorly ventilated livestock building in which the incoming cool air enters too fast would cause?
 - a.Drafts
 - b. Adequate temperature exchange
 - c.Improved air exchange
 - d. None of the above
- 69. The device that will turn ventilation fans on & off automatically by temperature variations is called a?
 - a. Humidistatb. Thermocouplec. Thermostatd. Rheostat

FORMULAS

Area of circle = $r^2 x 3.14$ Volume = area x height

- 1 cubic foot of water equals 7.5 gallons
- Watts = Volts x Amps
- Volts = Amps x Resistance(ohms)
- Slope = rise/run
